Beauty that is more than skin deep

Our vision is to contribute to a better environment, while also protecting people's health. Every step in production shows respect for the world around us – from raw materials and manufacturing to use and recycling. Our kitchen and bathroom fittings are made from highly durable materials in elegant and timeless designs. Your route to creating a beautiful home – where beauty is not just skin-deep...

360° and AR

It should be fun to plan the interior! Try rotating and zooming our products in 3D and explore how they fit into the interior – directly in your mobile or tablet!

With our AR (Augmented Reality) function, you can also easily see the products integrated into reality with the help of the mobile camera. It is possible, for example, to match a kitchen mixer with the worktop at home or in the kitchen store; or check which color of the mixer best matches the tile in the bathroom. No app is needed to test.

Try out AR by scanning the QR code with your phone and pointing the camera at a wall! The mixer in the picture on the right will appear in 3D on the wall on your phone screen, so you can see what it looks like with the rest of the interior.

Stainless Steel

Stainless steel enables durable and aesthetically pleasing design that never goes out of fashion. This is a material that gives bathroom and kitchen fittings an entirely new look and a lasting touch of quality.

Decorate with stainless steel

Our interior fittings in stainless steel are designed from a Scandinavian perspective that combines contemporary with traditional. The timeless properties of stainless steel create a lasting sense of quality and modernity, regardless of style and trends. This is a highly durable material that lasts for up to 30 years and is also 100% recyclable. Our interiors are meant to stand the test of time – both in design and function.

Thanks to advanced PVD technology, our stainless steel range offers elegant metal colours and ultra-matt industrial shades. These colours complement each other and enable you to select a harmonious range of fittings for your home. A material with the perfect combination of durability, function and form.

Environmentally friendly

Stainless steel is completely free from lead and other toxic heavy metals. It does not contain any substances that are harmful to health or the environment. The smooth interior of our mixers prevents bacterial growth and the adhesion of contaminants. The exterior is very easy to clean and hence maintain its shine. These hygienic properties make stainless steel ideal for interior design in kitchens, bathrooms and laundry rooms.

The consideration we give to people and the environment makes us the natural choice for many architects, interior designers, and others who prioritize modern, sustainable and carefully designed interiors.

PVD-colouring of stainless steel

Physical Vapour Deposition is a modern and advanced method of colouring stainless steel. It creates a stylish, scratch-resistant surface that is up to ten times harder than a lacquered product. We have chosen the best technology for a high-quality finish that also enhances the brushed surface of the steel.

Our PVD colours

Our stainless steel range with PVD finishes includes the very popular colours Sand, Amber, Champagne, Black and Shadow. These are unique metal colours with a timeless, traditional look that suits any style, from exclusive and romantic to industrial. The colours can be used to complement kitchen and bathroom fittings, or as eye-catching features that set the tone and enhance the overall impression.

The range also includes the exclusive by Scandtap series, in the ultra-matt colours Rust, Scrap and Coal. These finishes have been developed for, and approved by, architects who specialize in interior design. They have been carefully coordinated to evoke raw industrial materials that are often found together and harmonize with each other.

The PVD process

The finish is created through evaporation and ionization under vacuum. The colour actually penetrates the metal instead of just providing a surface coating. This means that no clearcoat finish is needed, which could gradually become dull or flake off. The result is a superior scratch-resistant and durable surface, which preserves the colour and shine without any unwanted patina.

PVD is one of the most sustainable finishing methods available and allows the creation of exclusive colours. Its many advantages make this technology an obvious choice for colouring stainless steel.

Scandtap Steel

Original

Classic stainless steel with a hand-brushed finish that is both timeless and contemporary. A durable material that blends into the home with its own character and creates unlimited design possibilities. Subtle variations in tone enhance the form. A versatile shade that complements any interior design style. From casting, welding and polishing – to a perfectly crafted fitting.

Sand

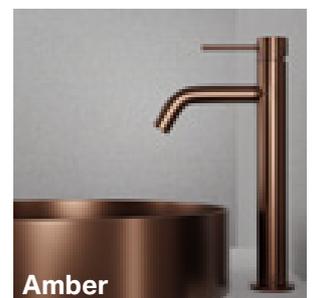

Elegance and exclusivity with the distinctive tones of brass. Inspired by coastal landscapes where rocks have been eroded into tiny grains with a warm golden colour. The brushed surface of hard steel adds an industrial look. An exquisite combination of lustrous brushed steel and an earthy shade.

Amber

Sophisticated copper-coloured finish inspired by natural amber. Each piece of amber has its own unique surface and warm colour, like the stainless steel that has been gently hand-brushed to perfection. The result is fittings that combine colours inspired by nature with contemporary industrial design.

Shadow

Strikingly dark metal with stylish brushed channels. The smooth, dark surface of Shadows balances softness with hardness. The black metal creates an exclusive look with timeless elegance. The colour opens up many design opportunities for creating contrast in the home, or as a complement to interiors in dark shades.

New!

Champagne

A light shade with a subtle metallic sheen. Champagne blends aspects of stainless steel with warm tones that radiate understated exclusivity. The brushed surface has a soft sheen that brings life to the space while also leaving room for interpretation. This is equally evident in the minimalist as in the expressive.

Black

Ideal for an interior with black details. Black is a semi matte black finish with a surface treatment to repel fingerprints. The depth in the finish is founded in the massive metallic core that defines Scandtap's stainless steel collection. Silken smooth Black is the most adaptable black finish, in perfect harmony with other details like stone, marble, and black lacquer finish decoration in the same nuance.

The surface of Black is designed to repel dirt and prevent the buildup of substances such as lime. Typically, cleaning can simply be performed with a damp microfiber cloth.

Classic

Hand polished

Polished stainless steel with raw characteristics. The high gloss silver surface has been polished by hand to its current finish. With a distinctive weight, the material is massive. In the kitchen and bathroom the surface is familiar, while at the same time the stainless steel adds a modern feel.

Range

The Classic range includes washbasin mixers, thermostatic mixers, built-in mixers, accessories and other bathroom details. With matching stainless steel interior, the bathroom can have a balanced style that feels well thought out.

We have a number of elegant kitchen mixer with our Classic finish, which can be combined with a matching detergent dispenser. Tie together the look used in your bathroom with matching colours in the kitchen to create a style that flows through your home.

by Scandtap

by Scandtap combines premium materials and designs in stainless steel with specially selected ultra-matt PVD finishes. These finishes have been developed for, and approved by, architects who specialise in interior design. Ideal for the modern industrial interior. by Scandtap – The Architect's Choice.

Personalise with by Scandtap

One of the key goals of by Scandtap is to give interior designers the greatest possible freedom to design beautiful, unique, and individual environments. Achieving this requires exceptional versatility. by Scandtap colours are carefully coordinated to evoke raw industrial materials that are often found close together. Wherever you find one of these colours, you often find the other two as well. The best design often arises from observing and reinterpreting what many take for granted. So it feels completely natural to combine these colours in the same interior environment.

by Scandtap

Rust

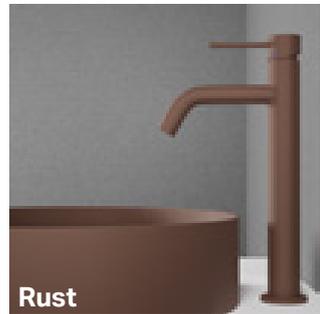

Tasteful with a rustic industrial touch. Rust combines the soft matt surface of the Scandtap series with colour tones that are reminiscent of oxidised metal. Steel that has been exposed to weather and wind for years develops a patina that reflects its history. This was the inspiration behind the Rust concept. It combines nostalgia with an industrial look, creating opportunities for design in many different styles.

Scrap

Stylish industrial finish in a modern guise. The matt dark-grey finish creates a clean and contemporary look, while also evoking rougher surfaces such as cement and concrete. Scrap draws inspiration from turn-of-the-century industry and creates associations with a charm and mystery that can be linked to many objects from this era.

Coal

The perfect matt black surface for stainless steel mixers. Inspired by the raw and industrial blackened metals that typified the age of steam. Coal is versatile and creates exceptional opportunities for uniquely individual interiors. The soft lustre and dark metal surface evoke and create a distinctive impression of solidity.

Rust

Scrap

Coal

Solid Surface

Solid Surface is a matt white composite material that combines a premium feel with a timeless minimalism – ideal for Scandinavian interior design.

The mineral-based material has the appearance of white stone. The surface is matt with a softness that opens up endless interior design possibilities. The easy-to-work material can be shaped into slender, expressive and gentle curves. Reflecting timeless Scandinavian design, these interior fittings complement both contemporary and traditional interior styles. A versatile and durable material with characteristics that give it a timeless elegance.

Another reason for choosing this material is that it creates a unique, elegant and exclusive look when combined with stainless steel fittings. The neutral, stone-like surface complements the distinctive metal finish and enhances the look of stainless steel. Together, they create a harmony that opens up new possibilities for combining materials and achieving unique design visions in bathroom interiors.

See pages 82-93 for our Solid Surface basins, and pages 98-107 for our Solid Surface interior fittings.

Looking after Solid Surface

The surface is durable and easy to clean. Stains are easily removed with mild soap or detergent and a scouring pad. Any minor marks, scratches or discolouration can be polished out with a Solid Surface Polishing Pad as the material is homogeneous, non-porous and coloured all the way through. Interior details in Solid Surface therefore have excellent durability over time.

Harmonized

Minimalism taken to a new level

Harmonized is a series of built-in bathroom and kitchen products designed with harmony in mind. Each interior fitting combines minimalist style with maximum comfort – uncompromising design with harmony as a keynote. This series includes basin mixers, thermostatic mixers and kitchen mixers in durable stainless steel for an elegant, spacious look with pipes and connectors concealed behind the wall or under the worktop.

Built-in wall-mounted basin mixer

The built-in series includes Harmonized 1 – a built-in basin mixer that takes the concept of slimline design to a whole new level. With concealed installation behind the wall, the mixer's pared-back design and simplicity take centre stage. Every detail of the design exudes minimalism, making it ideal for creating a peaceful, relaxing feel.

See Harmonized 1 on pages 30-31.

See also the built-in bidet mixer Harmonized B on pages 46-47.

Built-in mixer for ceiling shower and bath

What makes the thermostatic mixers in the Harmonized series distinctive is the timeless design and features that have been carefully selected to align with both practical and aesthetic visions. Along with twelve ready-made configurations with pre-selected accessories, it is also possible to customise your thermostatic mixer entirely to suit your tastes, with the Harmonized series product configurator. The options available include ceiling shower heads, bath spouts for wall or floor mounting, various hand showers, and hand shower holders in a variety of designs. These components are carefully designed to complement each other perfectly.

See our built-in thermostatic mixers on pages 146-171.

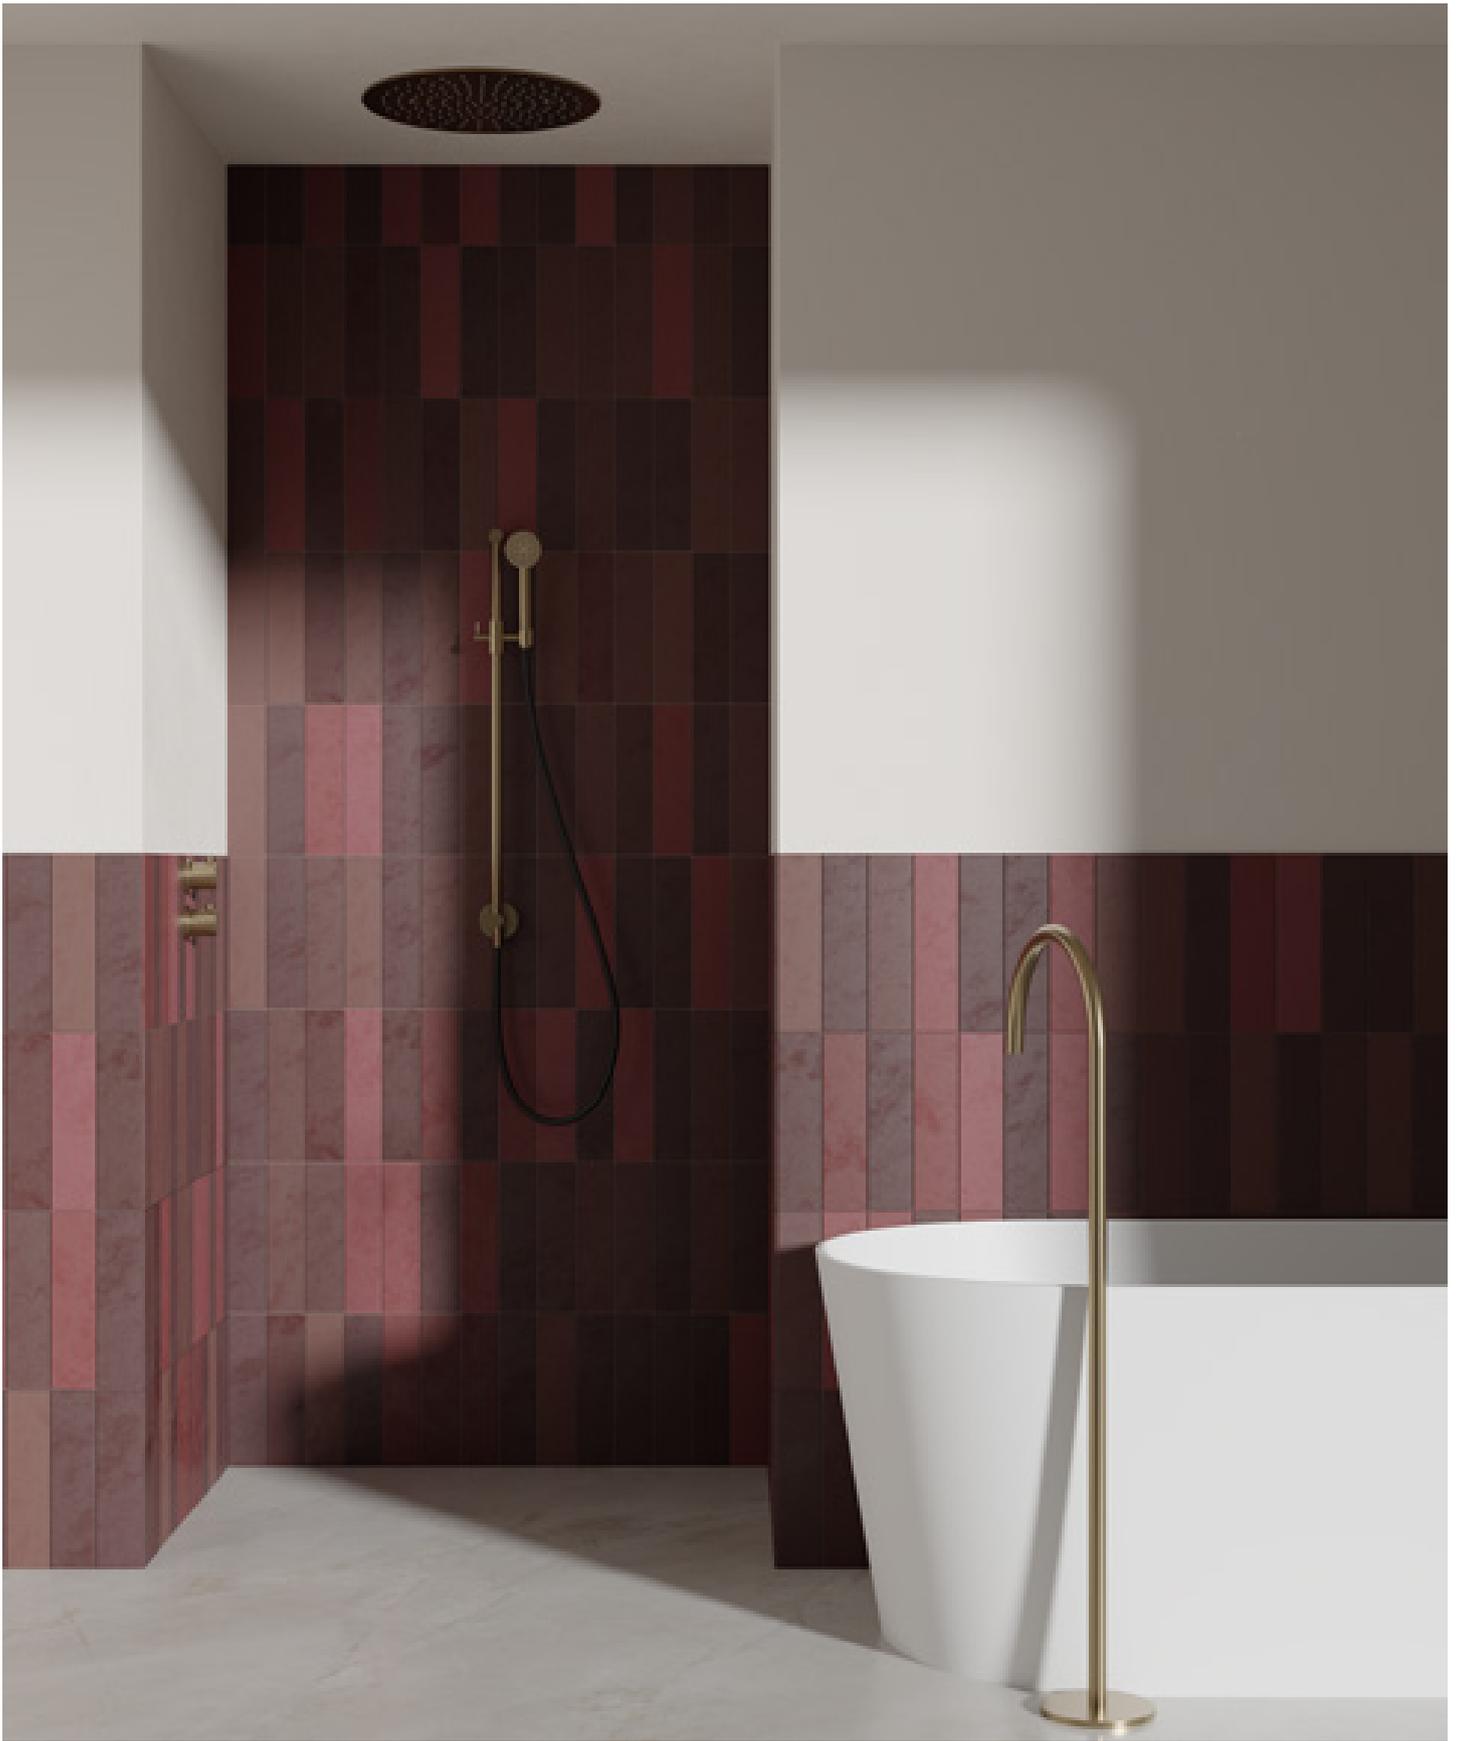

Try the product configurator by scanning the QR code on the next page.

Worktop-mounted built-in mixers for bathrooms and kitchens

The worktop-mounted single-lever mixers in the Harmonized series are characterised by minimalist design and separate spouts and handles. They can be mounted independently of each other in the worktop, at a maximum distance of 300 mm apart, offering new interior design options, as well as smart adaptations for right- and left-handed users. As the majority of the mixer is concealed under the worktop, only the key details are visible. The result is an elegant and minimalist design that does not compromise on functionality.

See worktop-mounted built-in mixers for bathrooms on pages 32-35 & 63-65.

See worktop-mounted built-in mixers for kitchens on pages 194-203 & 220-223.

Product configurator

Shown in this photo are a recessed ceiling showerhead, floor-mounted bath spout, adjustable shower set, and round hand shower. The colour shown is Champagne. The shower hose is the Black/Champagne option. Customize your own built-in mixer by scanning the QR code using your mobile phone.

Certifications & quality assessments

Our list of certifications is updated regularly. See scandtap.com for the most up-to-date list.

- The SINTEF technical approval TG 20819 applies to concealed boxes with article numbers: 21160.

- The PS 3154 SINTEF product certificate applies to single-lever basin mixers with article numbers: 10000, 10015, 10020, 10200, 10210, 10215, 10220, 10230, 10240, 10250 and the various colour options of these models.

- The PS 3156 SINTEF product certificate applies to single-lever kitchen mixers with article numbers: 30000, 30005, 30010, 30015, 30040, 30045, 30080, 30085, 30100, 30105, 30120, 30125, 30110, 30115, 30130, 30135, 30170, 30180 and the various colour options of these models.

- The PS 3158 SINTEF product certificate applies to thermostatic mixers with article numbers: 20000, 20010, 20020, 20040 and the various colour options of these models.

- The PS 3772 SINTEF product certificate applies to single-lever basin mixers intended for built-in installations with article numbers: 11000 and the various colour options of these models.

- The PS 3773 SINTEF product certificate applies to thermostatic mixers intended for built-in installations with article numbers: 21020, 21030, 21040, 21050, 21060 and the various colour options of these models.

- The PS 3857 SINTEF product certificate applies to single-lever kitchen mixers with article numbers: 30140, 30145, 30150, 30160 and the various colour options of these models.

- The PS 3930 SINTEF product certificate applies to single-lever basin mixers with article numbers: 10260, 10270 and the various colour options of these models.

- The GS mark applies to the towel warmer with the article number 15500, as well as the respective colour variants of this model.

- The KIWA type approval 1354 applies to single-lever basin mixers with article numbers: 10000, 10015, 10020, 10200, 10210, 10215, 10220, 10230, 10240, 10250, 10260, 10270 and the various colour options of these models.
- The KIWA type approval 1355 applies to single-lever kitchen mixers with article numbers: 30000, 30005, 30010, 30015, 30040, 30045, 30080, 30085, 30100, 30105, 30120, 30125, 30110, 30115, 30130, 30135, 30140, 30145, 30150, 30160, 30170, 30180 and the various colour options of these models.
- The KIWA type approval 1356 applies to thermostatic mixers with article numbers: 20000, 20010, 20020, 20040 and the various colour options of these models.
- The KIWA type approval 1786 applies to thermostatic mixers intended for built-in installations with article numbers: 21020, 21030, 21040, 21050, 21060 and the various colour options of these models.
- The KIWA type approval 1787 applies to single-lever basin mixers intended for built-in installations with article numbers: 11000 and the various colour options of these models.

- The STF type approval EUFI29-23000960-TH1 applies to single-lever basin mixers with article numbers: 10000, 10015, 10020, 10200, 10210, 10215, 10220, 10230, 10240, 10250, 11000, 10260, 10270 and the various colour options of these models.
- The STF type approval EUFI29-23000960-TH2 applies to single-lever kitchen mixers with article numbers: 30000, 30005, 30010, 30015, 30040, 30045, 30080, 30085, 30100, 30105, 30120, 30125, 30110, 30115, 30130, 30135, 30140, 30145, 30150, 30160, 30170, 30180 and the various colour options of these models.
- The STF type approval EUFI29-23000960-TH3 applies to thermostatic mixers with article numbers: 20000, 20010, 20020, 20040, 21020, 21030, 21040, 21050, 21060 and the various colour options of these models.

- The RISE Type approval C900448 applies to concealed boxes with article numbers: 21160.
- The RISE system approval C900449 applies to concealed boxes with article numbers: 21160.

- The DVGW product certificate applies to single-lever basin mixers with article numbers: 11100, 10200 and the various colour options of these models.

Harmonized K2

Mixer with separate spout and handle. Modern minimalist design with slim shapes and great adaptability. Distance and angle between grip and spout can be adjusted according to personal taste and needs. The mixer has a soft design language that gives a clean impression.

- Made from stainless steel
- Cold-Start function
- Can be locked in position so spout cannot be moved
- Neoperl nozzle

When installed in furniture with limited space under the worktop (e.g. due to a drawer), a 90° installation kit is available for purchase. See page 74.

Harmonized K2 Square

Mixer with separate spout and lever. Minimalist slim design with soft shapes and straight lines working together and enhancing one another. The distance and angle between the handle and spout can be adjusted to your personal preferences and needs. A design element with both subtle and exceptional presence.

- The handle can be mounted to the right or left of the spout.
- Made of stainless steel.
- Cold start function.
- The spout rotation range is adjustable, making cleaning the basin easier. The spout can also be locked at 0°.
- Directional Neoperl nozzle.

When installed in furniture with limited space under the worktop (e.g. due to a drawer), a 90° installation kit is available for purchase. See page 74.

Two-hole mixer accessories

90°-kit

Stainless steel installation kit with shorter connection pipe and 90° angle. For easier installation of Harmonized B2, Harmonized K2 and Harmonized K2 Square. For use where there is limited space under the worktop, due to smaller furniture with high drawers, for example. Reduces the distance from the bottom of the mixer to the lowest point of the connection pipe to 90 mm. Not suitable for models with a pull-out nozzle.

Cozied 1

Towel warmer in stainless steel. Vertical model with two double hooks that can be adjusted to taste during installation. The design is slim and minimalist with a distinctive character. Dries and warms one or more towels efficiently at the same time. The design and surface match Scandtap's stainless steel range.

- Made of stainless steel.
- Slim minimalist design.
- Double hooks allow for warming multiple towels at the same time.
- Discreet start button on top.
